-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 November 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 5-6, 7-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Pradhan (6,781,456).

Pradhan shows:

1. Apparatus for transferring a logic signal from a first unit (transmitter) to a second unit (LVDS receiver), the apparatus comprising:

a first conductor (INP, Fig. 3) for transferring the logic signal;

a complementary unit (inherent limitation since this is differential bus signal) for forming the complement of the logic signal;

a second conductor (INM) coupled to the complementary unit for transferring the logic signal complement; and

a verification unit (314, 306, 308, 310) coupled to the first and second conductor, the verification unit using the signals transferred by the first and second conductor to reconstitute the logic signal.

2. The apparatus as recited in claim 1 wherein the verification unit issues a preselected signal (OUT is low) when the verification unit can not reconstruct the logic signal (col. 3, lines 58-67 to col. 4, lines 32).
5. The apparatus as recited in claim 1 wherein the verification unit includes a logic EXCLUSIVE NOR gate (306, Fig. 4), the first conductor being coupled to a first input terminal (308) of the logic EXCLUSIVE NOR gate, the second conductor being coupled to a second input terminal (310) of the logic EXCLUSIVE NOR gate, the output terminal of the logic EXCLUSIVE NOR gate providing the preselected signal when an error in the transmission of the logic signal is identified.
6. The apparatus as recited in claim 1 wherein the first and second conductors are part of a bus.

The apparatus described above is applicable to the method claims 7-9.

3. Claims 1-4, and 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Hattori (6,593,801).

Hattori shows:

1. Apparatus for transferring a logic signal from a first unit (14, Fig. 2) to a second unit (16'), the apparatus comprising:
 - a first conductor (24) for transferring the logic signal;
 - a complementary unit (a small circle at 10) for forming the complement of the logic signal;

a second conductor (26) coupled to the complementary unit for transferring the logic signal complement; and

a verification unit (22 & 20) coupled to the first and second conductor, the verification unit using the signals transferred by the first and second conductor to reconstitute the logic signal.

2. The apparatus as recited in claim 1 wherein the verification unit issues a preselected signal (FSB is low) when the verification unit can not reconstruct the logic signal.

3. The apparatus as recited in claim 1 wherein the verification unit includes a logic AND gate (20), the first conductor coupled to a first terminal of the logic AND gate, the second conductor being coupled to an inverting terminal of the logic AND gate (FSB), the output terminal of the logic AND gate providing the logic signal in the absence of error.

4. The apparatus as recited in claim 3 wherein the output of the logic AND gate has a predetermined value (LOW) when an error is detected.

10. The automotive system for exchanging logic signals in an automotive unit, the system comprising:

a central processing unit (control logic consider as a processing unit, col. 1, line 37);

at least one peripheral unit (16'); and a bus coupling the central processing unit and the peripheral unit, the bus including a first (24, Fig. 2) and a second conductor (26);

wherein a signal transmitting unit includes an a logic signal inverting device (a small circle at 10) coupled to the second conductor, the transmitting unit applying a logic signal to the first conductor and to an input terminal of the logic signal inverting device;

wherein a signal receiving unit includes combining unit (22 & 20), the combining unit combining the signals on the first and second conductor to provide the logic signal when an error has not occurred to the signals transmitted by the first and second conductors (col. 1, lines 55-60).

11. The system as recited in claim 10 wherein the unit for combining includes a component for generating a preselected signal (LOW) when an error has occurred in the transmission of a signal on one of the first or second conductors.

12. The system as recited in claim 10 wherein the combining unit includes a logic AND gate (20), the first conductor being coupled a first input terminal of logic AND gate, the second conductor being coupled to a second and inverting input terminal (FSB) of the logic AND gate.

13. The system as recited in claim 11 wherein the component a logic EXCLUSIVE NOR gate (40, Fig. 5A), the first conductor (Z) being coupled to a first input terminal of the logic EXCLUSIVE NOR gate, the second conductor (Z) being coupled to a second input terminal of the logic EXCLUSIVE NOR gate.

Response to Arguments

4. Applicant's arguments filed 11/14/05 have been fully considered but they are not persuasive.

5. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., maximum voltage separation and the voltages that are transmitted over the two conductors are independent) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

6. In response to Applicant's argument that Pradhan includes additional structure not required by Applicant's invention, it must be noted that Pradhan discloses the invention as claimed. The fact that it discloses additional structure not claimed is irrelevant.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anh Q. Tran whose telephone number is 571-272-1813. The examiner can normally be reached on M-F (8:00-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rexford Barnie can be reached on 571-272-7492. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
